Corto #12 Cálculo Integral

Nombre: David Gabriel Corzo Manoth Carnet: 20190432

1. (50 pts.) ¿Cuál es la ec. de la recta tangente a la curva polar $r=2-\sin\theta$ en $t=\pi$?

$$r = 2 - \sin \theta$$

$$\sin \theta = \frac{y}{r} \Rightarrow \sin \theta \cdot r = y \Rightarrow \sin \theta \left(2 - \sin \theta\right) = y$$

$$\cos \theta = \frac{x}{r} = \cos \theta \cdot r = x = \cos \theta \left(2 - \sin \theta\right) = x$$

$$y'(\theta) = \frac{d}{d\theta} \left(2\sin\theta - \sin^2\theta \right)$$

$$= 2\cos\theta - 2\sin\theta \cdot \cos\theta$$

$$= 2\cos\theta - \sin(2\theta)$$

$$x^{3}(\theta) = \frac{d}{d\theta} \left(2\cos\theta - \cos\theta \sin\theta \right)$$

$$\sin(2\theta) = 2\sin\theta \cdot \cos\theta$$

$$\frac{\pi}{2}\sin(2\theta) = \sin\theta \cos\theta$$

$$\frac{dy}{dx} = \frac{y^{2}(\theta)}{x^{2}(\theta)} = \frac{2\cos\theta - \sin(2\theta)}{-2\sin\theta - \cos(2\theta)} = \frac{d}{d\theta} \left(2\cos\theta - \frac{1}{2}\sin(2\theta)\right)$$

$$= \frac{y^{2}(\pi)}{x^{2}(\pi)} = \frac{2\cos(\pi) - \sin(2\pi)}{-2\sin(\pi) - \cos(2\pi)} = -2\sin\theta - \frac{1}{2}\cos(2\theta)$$

$$= -2\sin\theta - \cos(2\theta)$$

$$= -2\sin\theta - \cos(2\theta)$$

$$= \frac{3}{30} \left(2\cos \theta - \frac{1}{2}\sin(2\theta) \right)$$

$$= -2\sin \theta - \frac{1}{2}\cos(2\theta) \cdot 2$$

$$= -2\sin \theta - \cos(2\theta)$$

$$=\frac{2(-1)-107}{-2(5)-1}=\frac{-2}{-1}=2=m$$

$$y(\pi) = 2\cos(\pi)^{-1} - \frac{1}{2}\sin(2\pi)^{0}$$

$$= -2$$

$$y(\pi) = 2\sin(\pi)^{0} - \sin^{2}(\pi)^{0}$$

$$= 0$$

$$y = 2(x+2) + 0$$

= $2x + 4$ 30

2. (50 pts.) Encuentre la longitud de medio cardioide $r = \sin^2\left(\frac{\theta}{2}\right)$ en $0 \le \theta \le \pi$.

$$\mathcal{L} = \int_{a}^{b} \sqrt{r^2 + (r^2)^2} d\theta$$

$$f = \int \sqrt{\sin^2(\frac{\theta}{2})} + \sin^2(\frac{\theta}{2}) \cos^2(\frac{\theta}{2})$$

$$= \sin(\frac{\theta}{2}) \cos(\frac{\theta}{2})$$

$$= \sin(\frac{\theta}{2}) \cos(\frac{\theta}{2})$$

$$= \sin(\frac{\theta}{2}) \cos(\frac{\theta}{2})$$

$$= \sin(\frac{\theta}{2}) \cos(\frac{\theta}{2})$$

$$= \sin^2(\frac{\theta}{2}) \cos^2(\frac{\theta}{2})$$

$$= \sin^2(\frac{\theta}{2})$$

$$= \sin^2(\frac{\theta}{2})$$

$$= \sin^2(\frac{\theta}{2})$$

$$= \sin^2(\frac{\theta}{2})$$

$$= \sin^2(\frac{\theta}{2})$$

$$= \sin^2(\frac{\theta}{2})$$

$$= \int \sin\left(\frac{\theta}{2}\right) \cdot 1 d\theta$$

$$u = \frac{\theta}{2} du = \frac{1}{2} d\theta$$

$$= 2 \int \sin(\omega) d\omega$$

$$u(\pi) = \frac{\pi}{2}$$

$$u(0) = 0$$

$$= 2 \left[\left(-\cos \left(\frac{\pi}{2} \right) \right) - \left(-\cos \left(\frac{\pi}{2} \right) \right) \right] = 2 \left[0 + 1 \right] = 2 \left[1 \right] = 2 \left[1 \right]$$

$$r^{2}(\theta) = \frac{d}{d\theta} \left(\sin^{2}\left(\frac{\theta}{2}\right) \right)$$

$$= \frac{d}{d\theta} \left(\sin^{2}\left(\frac{\theta}{2}\right) \right) \cdot \cos\left(\frac{\theta}{2}\right) \cdot \frac{1}{2}$$

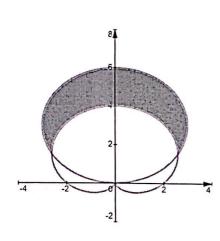

$$= \sin\left(\frac{\theta}{2}\right) \cos\left(\frac{\theta}{2}\right)$$

$$\left(r^{2}(\theta)\right)^{2} \Rightarrow \sin^{2}\left(\frac{\theta}{2}\right) \cos^{2}\left(\frac{\theta}{2}\right)$$

$$r^{2} = \left(\sin^{2}\left(\frac{\theta}{2}\right)\right)^{2}$$

$$= \sin^{4}\left(\frac{\theta}{2}\right)$$

3. (50 pts.) Encuentre el área de la región que está dentro del círculo $r=6\sin\theta$ y fuera del cardioide $r=2+2\sin\theta$.

$$A = \frac{1}{2} \int_{a}^{b} r_{\text{ext}}^{2} - r_{\text{int}}^{2} d\theta$$

$$6\sin\theta = 2 + 2\sin\theta$$

$$6\sin\theta - 2\sin\theta = 2$$

$$\sin\theta (6 - 2) = 2$$

$$\sin\theta = \frac{2}{4}$$

$$A = \frac{1}{2} \int (6 \sin \theta)^{2} - (2 + 2 \sin \theta)^{2} d\theta \frac{\pi}{6} \int \frac{\pi}{6}$$

$$\frac{\pi}{6} \int \frac{\pi}{6} \int \frac{\pi}{6}$$

$$= \frac{1}{2} \int 32 \cdot \frac{1}{2} \left(1 - \cos(2\theta) \right) - \mathcal{E} \sin \theta - 4 d\theta$$

$$= \frac{1}{2} \int 12 - 32 \cos(2\theta) - \mathcal{E} \sin \theta d\theta$$

$$= \frac{1}{2} \left[12\theta - 16 \sin(2\theta) + \mathcal{E} \cos \theta \right]$$

$$= \frac{1}{2} \left[\left(12 \frac{\pi}{2} \right) - 16 \left(0 \right) + \mathcal{E} \left(0 \right) \right) - \left(12 \frac{\pi}{6} - 16 \left(\frac{\sqrt{3}}{2} \right) + \mathcal{E} \left(\frac{\sqrt{3}}{2} \right) \right]$$

$$= \frac{1}{2} \left[\left(16 \pi - 2\pi + 8 \sqrt{3} \right) - 4 \sqrt{3} \right]$$

$$= \frac{1}{2} \left[4\pi + 4\sqrt{3} \right]$$

$$= \frac{1}{2} \left[4\pi + 4\sqrt{3} \right]$$

$$= \frac{1}{2} \left[4\pi + 4\sqrt{3} \right]$$
